The satisfaction that comes from working with superior technology

Speed

Copy, print & network capability – all at impressively high speed

Speed is essential to business success. So are the e-STUDIO855 series. Equipped with 3rd generation e-BRIDGE architecture, their entire systems are refined and productivity is accelerated to deliver impressive speeds of 55/65/75/85 ppm respectively.

What's more, the advantage of 3rd generation e-BRIDGE technology means the e-STUDIO855 series are also high-speed network ready as standard, providing further simplicity and efficiency for each and every member of your team.

Models of eco-friendliness

Toshiba is committed to providing environmentally friendly solutions. Energy Star and the European RoHS directive for preventing the introduction of hazardous substances into the environment are but a few of the stringent national and international standards the new e-STUDIO Systems comply with.

Additionally the e-STUDIO855 series combines eco-friendliness with cost effectiveness by using an internal toner recycling system and a reduced power consumption in sleep mode of just 1 watt.

Versatile finishing features

Because appearances speak volumes about your company, the new systems each offer a range of insertion and finishing capabilities that make the completed document appear altogether more polished. Simply select from standard sorting, tab printing, optional stapling, saddle stitching, hole punching and sheet insertion, and see the difference it can make to your communication.

High-volume advantages

Equipped with a 100-sheet Reversing Automatic Document Feeder as standard, the e-STUDIO855 series can automatically and continuously feed up to 2,000 images of original documents per job, leaving you free to get on with more profitable activities. What is more, they also feature reservation capability for up to 10 separate walk-up jobs and offer an ample 5 way paper supply of up to 7,600 sheets, including the option of a 4,000-sheet external Large Capacity Feeder.

Total confidence born of superb reliability

High-volume, high-speed MFP performance used to go hand in hand with high cost. Now all that is about to change, with the unveiling of the new e-STUDIO855 series – The exciting new range of network-ready MFP's developed by Toshiba.

Each incorporating advantage of 3rd generation Toshiba e-BRIDGE technology, they offer rapid 55/65/75/85 pages per minute performance while boasting surprisingly attractive initial costs and exceptionally low TCO (Total Cost of Ownership). The new e-STUDIO855 series integrate effortlessly into networks and workflows and comply with the highest security and environmental standards.

Blending new performance, satisfaction and reliability with 3rd generation e-BRIDGE technology, the e-STUDIO855 series deliver true Toshiba quality for the office that seriously means business.

Durability

Extreme durability, exceptional reliability
Familiarity plays a big part in your team getting the most out of the office MFP. And because the e-STUDIO855 series are each designed for surprisingly long durability, your staff can come to rely on a single advanced office advantage and gain a better understanding of its capabilities for further refined workflows. Furthermore, active measures have been built into the e-STUDIO855 series to ensure less frequent visits by service technicians – further increasing uptime and building on a sense of high-level dependability.

Productivity

Maximum uptime
At Toshiba, we know how frustrating it can be to have to stop right in the middle of an urgent job to replenish toner. That is why the e-STUDIO855 series have been specially designed to make sure such a problem never occurs by allowing toner to be exchanged right in the middle of a job.

ADU boosts productivity by 100%
The advantage of an ADU (Automatic Duplex Unit) gives your office the power to produce dual-sided output, thereby saving on paper and, of course, cost. In the case of the new systems, however, advanced ADU performance also allows you to save time – producing a 100% boost in productivity with dual-sided copying and printing that can be as fast as single-sided output.

Easy network and work-flow integration
Fully Vista-compatible, the new e-STUDIO855 series come ready equipped for network integration with IPv4/IPv6 support, Web service on Devices, USB2.0 and optional WLAN and Bluetooth.

OPEN PLATFORM

The new e-BRIDGE Open Platform streamlines workflows: Based on industry standards XML and web service technology, Open Platform starts workflow integration directly at the system. And Meta Scan allows connectivity with doument management workflows with a single push of a button.

Operability

The hallmarks of Toshiba's leading technology are easy management and workflow integration. With 3rd generation e-BRIDGE you effortlessly handle all print, copy, scan and fax tasks. The systems' large 8.5" Colour LCD with its new user interface and "My menu" function makes for easy, intuitive and customisable operation. With the e-Filing document server you can securely store, recompile and print documents on demand.

Easy access Template
Speed up repeated processes with the easy-to-use template function. It allows you to store frequently used settings, such as resolution, recipient address and finishing options for further efficiency during scan, copy and fax jobs. Individualise your User Interface with up to 200 groups of 60 templates each.
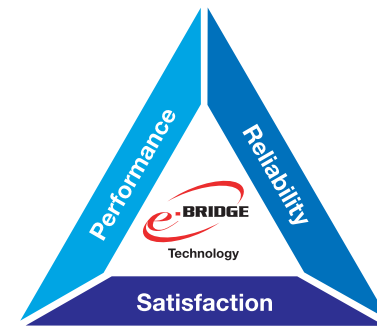

Security

The new e-STUDIO855 series satisfy the most stringent security requirements. The built-in firewall and Secure PDF restrict access to the system and your data. Transmissions are secure thanks to SSL and optional IPSec support. Standard AES encryption and the optional Data Overwrite Kit reliably protect your files on the hard drive. Making full use of ActiveDirectory and LDAP-Servers, Role Based Access allows for easy cost control by assigning individual print volumes to single users or groups. Combine this with the optional ID-Gate proximity card reader, and the need to remember passwords becomes a thing of the past.

PDF encrypted
The Scan function in the new systems allows to create PDF files protected by password and encrypted with 40- or 128-bit keys. This means high-level security for sensitive PDF documents.
